

About Innovolt Inc.

Your next generation power protection, energy management, and energy efficiency solution.

Innovolt provides next generation power protection products for Residential, Commercial, Industrial, OEM, and Utility Customers.

Based out of Atlanta, Innovolt Inc. was founded in 2005 by Dr. Deepak Divan – a world leading researcher, pioneer and entrepreneur in the area of Power Electronics for over 30 years.

The company has since successfully graduated from Georgia Tech Venture Lab in May 2007, joined the ATDC community – and is well on its way to commercialize the new technology into cutting-edge next generation Power Protection products.

Our products are based on the latest, state-of-the-art, UL-certified and patent pending Power Protection Technology: CVSS™ – Current & Voltage Surge Suppression. This technology prevents your electronic equipment from getting damaged not only from Voltage Surges but also from Over Voltage, and Current Surges – a phenomenon not addressed by existing TVSS (Transient Voltage Surge Suppression) devices available in the market place. This is essential for the power quality in today's increasingly digital world.

We are led by an executive team with a superior track record who successfully transferred innovative and disruptive research to the marketplace. President and Chief Executive Officer Mr. Suresh Sharma is a former General Electric executive with extensive global leadership experience in business and technology.
