

Innovolt Inc. partners with Integral Technologies Pvt. Ltd.

July 18, 2007 | Atlanta, GA

Press release

Innovolt, Inc. of Atlanta, Georgia, USA has acquired a majority ownership interest in **Integral Technologies Pvt. Ltd.** of Pune, India. “This strategic investment enables the combined group to emerge as a leading design, engineering and manufacturing hub for global state-of-the-art products in Power Protection and Energy Efficiency Industry”, said Mr. Suresh Sharma, President and CEO of Innovolt.

Innovolt is a global technology and innovation leader in Power Protection and Energy Management solutions. Their Current and Voltage Surge Suppressor (CVSS) line of products, covered by pending US and International Patents, protect electronics equipment such as televisions including plasma and LCD, computers, copiers, washing machines, refrigerators, microwaves, as well as medical and test instruments, not only against Voltage Surges, but also from Current-inrush Surges, as well as from sustained Over- & Under-Voltage conditions – directly enhancing the life and safety of expensive electronic equipment used in consumer, office, medical and industrial applications.

Innovolt is founded on the science, technology and inventions of Dr. Deepak Divan, one of the world’s leading researchers in Power Electronics, a serial entrepreneur, and currently a professor at Georgia Institute of Technology, Atlanta U.S.A. The company’s products are now being designed, engineered and manufactured by the talented team of engineers at Integral under the seasoned leadership of Mr. Rajesh Mehta, Managing Director of Integral Technologies - himself a proven and acclaimed innovator of several Energy Efficient technologies in India.

“We are very excited about Integral becoming a part of us. Besides, positioning us at the centerstage of the large Indian domestic market, it brings us world-class talent enabling to set up a Center of Excellence for New Product Development and Manufacturing” said Dr. Divan, also the Chairman, and Chief Technology & Innovation Officer of Innovolt.

The synergies between the two companies go much beyond Power Protection devices. Integral Technologies is a leader in Energy Efficient lighting for the Indian market, providing next generation LED based lighting systems for architectural, signage, industrial, commercial and residential applications. LED lights consume much less energy compared to incandescent and fluorescent lamps. These bring significant energy savings, better color choice, and support ecofriendly societies going forward.

“Our team is ready for global growth and competitive challenges. Combining the strengths – we are committed to be a world-class product design, engineering, and manufacturing center for Energy Efficiency and Power Protection Industry – extending our mission of ‘**Savings and Safety**’, and developing innovative new products at globally competitive cost and quality”, said Mr. Rajesh Mehta, with a rare blend of confidence, humility and sincerity.
