

W250

Compact protection.

Basic power protection in a compact solution

The Innovolt W250 is a convenient way to protect a single outlet from surge and noise power anomalies. To save space and allow it to fit into small environments, the W250 is a direct plug-in three-prong solution that is designed to protect laptops, projectors and A4 printers. Based on its size, the W250 is also a great travel solution for portable electronics.

The W250 features a “protected” LED that illuminates to indicate that surge suppression is still available. Innovolt’s W250 protects against two of the five major power anomalies.

For more sophisticated equipment that requires greater protection against all five power anomalies, including current inrush, but still require a smaller footprint, the W1500 is an ideal solution.

Product Model // W250-15-120

PARAMETER	W250-15-120
Nominal operating voltage	120 V, 60 Hz
Max. continuous current	15 A
Voltage surge per UL 1449	330 VAC L-N 330 VAC L-G 330 VAC N-G
Plug	
Receptacle
